Dielectric and Exir Broadcasting & Telecom AB Enter Into Sales Partnership

RAYMOND, Maine — March 3, 2009 — Dielectric Communications, a division of SPX and a leader in broadcast antenna systems, today announced that it has partnered with Exir Broadcasting and Telecom AB, formerly Teracom Components AB, to expand the RF product lines each company offers to its customers in the digital audio and video broadcasting industries and 3G telecom market. Under the terms of the agreement, Dielectric will now augment its own product line with Exir's low-power RF filters and combiners. Exir will begin selling Dielectric's high-power television and radio RF systems worldwide.

"Teaming up with one of North America's largest and most renowned suppliers of broadcast equipment is very exciting," said Hans Dahlén, general manager at Exir Broadcasting and Telecom AB. "It enables us to complement each other's product ranges in a way that our customers will certainly appreciate."

"Our partnership with Exir presents an excellent opportunity for added value to our customers," added Dielectric President Garrett VanAtta. "By tapping into the excellent low-power technologies Exir already has available, we're able to extend our product offerings and provide more cost-effective solutions for our customers. We're very excited to work with Exir to expand the products and service we can supply to our television and radio customers around the world."

More information on Dielectric's full range of broadcast antenna systems is available at www.dielectric.com.
