

RECONFIGURABLE MANIFOLD COMBINER

Novel approach to multi-channel combining leveraging proven filter design and advanced modeling techniques. This approach provides an economical, future proof combiner that offers both expandability and a compact footprint.

SPECIFICATIONS

- < 50% of the footprint of traditional CIF combiners
- More economical option over traditional CIF
- Simplicity of layout results in ease of installation
- Spline configuration can be predicted to accommodate new channels
- Can be designed for expansion up front with un-used modules as spare or pre-tuned
- Equal distribution of system losses across stations
